

QXR Architecture

One Security Ecosystem. Flexible Deployment. Unlimited Growth.

QXR combines modern cloud-native video management with enterprise access control, giving organizations the flexibility to deploy security the way they want- whether cloud, on-premise, or hybrid. Built on an open architecture, QXR allows customers to preserve existing investments while adding new technologies over time without vendor lock-in.

The QXR Ecosystem

Cloud-Native Management

QxControl securely connects users, cameras, gateways, and access control devices through a centralized cloud platform accessible from any browser.

Open Hardware Ecosystem

Integrates with leading IP cameras, intelligent door controllers, wireless locks, and supported third-party technologies to maximize deployment flexibility.

Unified Security Operations

Video, access events, investigations, automation, and analytics work together within a single operational interface.

Key Benefits

- **Open Platform:** Preserve existing investments while integrating best-of-breed security technologies.
- **Cloud, Local, or Hybrid Deployment:** Choose the architecture that best fits each customer environment.
- **Browser-Based Management:** Securely manage sites from desktop, tablet, or mobile without dedicated client software.
- **Enterprise Scalability:** Easily expand from a single location to multi-site enterprise deployments.
- **Edge Intelligence:** Leverage on-site gateways for resilient connectivity, optimized bandwidth, local recording, and seamless cloud management.
- **Cybersecure by Design:** Built with secure communication and modern cloud architecture for enterprise-grade protection.
