

ACCESS CONTROL INTEGRATION

Using existing hardware to deliver a secure multi-site facility

THE SCENARIO

32 Union Apartments is just minutes from historic downtown Noblesville. It's a hot spot for renters to move closer to the city, growing shopping centers, and entertainment facilities. Security is of utmost importance, with over 120 apartment units located near downtown.

In June 2021, the 32 Union Apartments had issues controlling access to their buildings. The eight multi-family apartment buildings were not only struggling to communicate with each other but could not be monitored effectively.

With eight buildings on the property and issues with access control, security quickly became a growing concern. Additionally, the management team could not easily make changes or update their systems due to the local on-premises servers requiring on-site personnel to manage the door controllers and cameras.

“Qumulex has become a vital part of our solution for multi-family surveillance and access control.”

Ryan Geltz

CEO
Pro Security & Automation

THE NEED

The current system was no longer working effectively. The door controllers must have their database wiped and uploaded to add contacts. The camera system needed to be fixed along with their access control system.

Unified System- They wanted both access control and video surveillance to work together seamlessly.

Cloud Access Control - If a tenant gets locked out or forgets their keycard, a quick phone call to the front desk can unlock the door and let them in.

Mobile Option- Management wanted the ability to see all cameras and doors from their mobile phone.

“We can now upgrade existing server-based VMS systems and utilize existing hardware from multiple manufacturers while still offering a flexible cloud-based solution. Our clients have found the interface to be super easy to navigate and need minimal training allowing them to truly maintain the system.”

— Ryan Geltz

“When there are issues, we can get real-time notifications and remotely access the server, controllers, and cameras without having to roll a truck to provide exceptional service to our clients. I highly recommend Qumulex to any integrators doing surveillance and access control.”

— Ryan Geltz

THE SOLUTION

QxControl by Qumulex was an easy choice and a perfect fit for the needs of 32 Union Apartments. As a unified platform, it enables them to manage their access control and video surveillance in one place. As a cloud-based platform, it enables remote entry access when tenants forget their keycard. And since QxControl is delivered as a Progressive Web App (PWA), it enables identical functionality whether 32 Union is accessing it on a desktop browser or a mobile device.

QxControl is an open system that works with the existing hardware of **Axis A1001** panels for access control and various camera brands throughout the property. Automatic discovery pulled all the cameras into the system, and because of the easy-to-use interface, training the staff was fast and productive. It solved all the pain points, and the management staff of 32 Union apartments could finally monitor and help the tenants when needed.
